| $\mathrm{Z}_{\mathrm{a}}-\mathrm{Z}_{\mathrm{d}}$ | Outputs |  |  |  |

## Functional Description

The 'F157A is a quad 2-input multiplexer. It selects four bits of data from two sources under the control of a common Select input (S). The Enable input ( $\overline{\mathrm{E}}$ ) is active LOW. When $\bar{E}$ is HIGH, all of the outputs ( $Z$ ) are forced LOW regardless of all other inputs. The ' F 157 A is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input. The logic equations for the outputs are shown below:

$$
Z_{n}=\bar{E} \cdot\left(I_{1 n} S+I_{O n} \bar{S}\right)
$$

A common use of the 'F157A is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The 'F157A can generate any four of the

16 different functions of two variables with one variable common. This is useful for implementing highly irregular logic.

Truth Table

| Inputs |  |  |  | Output |
| :---: | :---: | :---: | :---: | :---: |
| $\bar{E}$ | $\mathbf{S}$ | $\mathrm{I}_{\mathbf{0}}$ | $\mathrm{I}_{\mathbf{1}}$ | Z |
| H | X | X | X | L |
| L | H | X | L | L |
| L | H | X | H | H |
| L | L | L | X | L |
| L | L | H | X | H |

## Ordering Information

The device number is used to form part of a simplified purchasing code where the package type and temperature range are defined as follows:

Physical Dimensions inches (millimeters)

Physical Dimensions inches (millimeters) (Continued)

16-Lead ( $0.150^{\prime \prime}$ Wide) Molded Small Outline Package, JEDEC (S) NS Package Number M16A

Physical Dimensions inches (millimeters) (Continued)

## LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
